

ELIMINATE THE FRICTION BETWEEN DEVELOPERS & SECURITY

The adoption of cloud-native applications and infrastructure has created a culture where developers go from code to cloud at alarming rates. Legacy application security systems and processes can't scale at the speed of DevOps, resulting in unmanaged risk being introduced into critical environments.

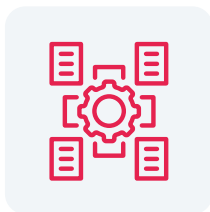

The Solution: Tromzo's Product Security Operating Platform

Single source of truth to identify every software artifact in your organization, who owns it and its true risk based on business context.

Security guardrails using pre-built and customizable security policies to ensure continuous compliance across the software supply chain.

Accelerating vulnerability management and risk remediation using no-code security automation to lower MTTR and increase SLA compliance.

With customizable KPIs & dashboards, deliver data driven analytics and insights to all stakeholders across the organization.

100%

Ensure security scan coverage for all business critical assets.

92%

Increase in visibility of software assets with associated ownership.

20+ HOURS

Saved weekly on manually triaging and tracking vulnerabilities.

>56%

Reduction in Mean Time To Remediate (MTTR) for issues that matter.

Tromzo Advantage at a Glance

- Empower application/product security teams and improve security risk posture.
- Enable developers to go from code to cloud, securely.
- Scale vulnerability management so developers can focus on what really matters.
- Drive security accountability across engineering.
